Music /Message On Hold

SX9600

Description

The SX9600 is a new revolutionary digital player, designed to provide the ultimate in “easy updating” in a continuous play audio source for message and music on hold applications.

This device delivers outstanding audio quality storing recordings on a non-volatile removable flash card. Unlike other flash based cards that compress the audio, audio is recorded directly into solid state memory in it’s natural, uncompressed form providing superior quality voice and music.

This unit comes with a DS9600 “audio feed” docking station that records the flash cards automatically by simply playing the MP3 or wave audio file. There is no user involvement, no buttons to press, no software drivers to install, no USB ports to find and no PC operating systems to worry about. This is the same process already used to get approval on a production. For users less computer savvy or with no email access, a flash card can always be mailed.

SX9600/DS9600 provides an easy to use, easy to update and fast turnaround solution for message on hold applications.

- Up to 34 minute removable flash card media
- Easy and automatic recordings via “audio port”
- Totally PC operating system independent
- No USB or port involvement
