

SX9200 digital player

The SX9200 is a state-of-the art digital player with superior high quality playback and ease of use. It is designed to provide a continuous-play digital audio system for music/message-on-hold, product/service announcement, background music or any other application requiring high quality audio playback.

Unlike other digital players the SX9200 utilizes "True audio Card" technology - the MX9000 "True Audio Card" is a flash card that has been pre-recorded with audio directly, e.g. the voice and audio is directly recorded into solid state memory in their natural, uncompressed form providing superior quality voice and music reproduction. This process allows the MX9000 cards to be recorded from any audio source in any format e.g. Windows .wav, CD, MP3, WMA, even Windows media player with SRS surround sound and WOW effects.

The audio program can be loaded into the SX9200 in a simple way:

- **Card Load** - by inserting the "True audio card", a cutting edge, flash technology, stamp sized re-record-able card (two cards are included)

The SX9200 player is a flexible and easy to use player with a list of latest technology features not found in other players, these include:

- **Tone control** - this is a very important control found on professional players. This makes the audio sound much better on some phone systems. It controls the frequency of the audio playback and it can make it sound richer with super BASS.
- **Dual Banks** - there are 2 Banks to play which allows a second bank to hold recordings for "Holidays",

"special" sales/events, etc. a switch on the SX9200 controls this function. Using this switch the SX9200 instantly starts its playback from the 2nd bank. It makes it so easy and convenient during the "holiday times" or anytime a different playback is needed

- **Zero moving parts** - 100% digital with no built-in CD or cassette player to wear and tear
- **Zero power storage** - messages and music are retained all the time in power outage, playback automatically resumes when power is restored
- **All-solid-state design** no mechanical moving parts at all
- **Consistent audio output** with absolutely no degradation in the sound quality throughout the product's life
- **Highest level audio quality** and fully maintenance free
- **1 to 16 minutes** of audio playback capability
- **Dual outputs** of 8 ohm and automatic 600 ohms/1200 ohms
- **Built-in speaker** transducer
- Audio volume control with 1000 milliwatts of power
- **Visual VU:** Multi color LED audio level indicators illuminate according to the audio level
- CD level audio quality
- Attractive design enclosure with wall mounting capability
- 5-year parts and labor warranty
- Manufactured in the USA in high quality ISO 9002 factory
