SX9258 digital player/recorder

The SX9258 is a state-of-the art digital player / recorder with simple push button record-ability and ease of use. It is designed to provide a continuous-play digital audio system for music/message-on-hold, product/service announcement, background music or any other application requiring high quality audio playback.

Unlike other digital players the SX9258 utilizes "True audio recording" - the voice and audio programs are recorded directly into solid state memory in their natural, uncompressed form providing superior quality voice and music reproduction. This allows the SX9258 un-restricted recording ability from any audio source in any format e.g. Windows .wav, CD, MP3, WMA, even Windows media player with SRS surround sound and WOW effects.

The audio program can be loaded into the SX9258 in two simple ways:

- **Card Load** - by inserting the "True audio card", a cutting edge, flash technology, stamp sized re-record-able card (a pre-recorded card with "thank you for holding…" music on hold by professional male and female voice artist talent is included)
- **Direct Load** - a simple push button recording from any audio source such as a PC speaker jack, CD player, radio, tape, DVD player, iPod or MP3 player, etc.

Headset: The SX9258 comes complete with a headset that is simply inserted into a jack on the device. The recording can be done by just pushing one button on the SX9258. The SX9258 can record from any audio source, a PC, CD player, iPod or other audio sources may be connected to its "Audio IN" jack for direct recording.

The SX9258 player/recorder is a flexible and easy to use player with a list of latest technology features not found in other players, these include:

- **Tone control** - this is a very important control found on professional players. This makes the audio sound much better on some phone systems. It controls the frequency of the audio playback and it can make it sound richer with super BASS.
- **Dual Banks** - there are 2 Banks to play/record into which allows a second bank to hold recordings for "Holidays", "special" sales/events, etc. a switch on the SX9258 controls this function. Using this switch the SX9258 instantly starts its playback from the 2nd bank. It makes it so easy and convenient during the "holiday times" or anytime a different playback is needed
- **Zero moving parts** - 100% digital with no built-in CD or cassette player to wear and tear
- **Zero power storage** - messages and music are retained all the time in power outage, playback automatically resumes when power is restored
- **All-solid-state design** - no mechanical moving parts at all
- **Consistent audio output** with absolutely no degradation in the sound quality throughout the product's life
- **Highest level audio quality** and fully maintenance free
- **1 to 16 minutes** of audio recording capability
- **Dual outputs** of 8 ohm and automatic 600 ohms/1200 ohms
- **Built-in speaker** transducer
- Audio volume control with 1000 miliwatts of power
- **Visual VU:** Multi color LED audio level indicators illuminate according to the audio level
- CD level audio quality
- Attractive design enclosure with wall mounting capability
- 3-year parts and labor warranty
- Manufactured in the USA in high quality ISO 9002 factory
